Cloning the Repository and Setting Up the Environment

To get started, follow these steps to clone the repository, set up a virtual environment, and install the dependencies on your platform.

Step 1: Clone the Repository

Run the following command in your terminal or command prompt to clone the repository:

```
git clone https://github.com/Coding-Crashkurse/LangGraph-Udemy-Course.git
cd LangGraph-Udemy-Course
```

Step 2: Create a Virtual Environment

Linux/Mac:

Run:

```
python3 -m venv .venv
source .venv/bin/activate
```

Windows:

Run:

```
python -m venv .venv
.venv\Scripts\activate
```

Step 3: Install Requirements

With the virtual environment activated, install the required packages:

```
pip install -r requirements.txt
```

Step 4: Verify Setup

Run the following command to ensure all dependencies are installed correctly:

```
python -m pip list
```

You're now ready to start the course!
